

The time to collect more data has passed: the right action is clear.

As a citizen with deep concerns about the health and safety of my family, friends, neighbors and environment, I demand total removal and off-site disposal of all PCB wastes at the Allied Site to a TSCA approved landfill.

A dangerous site with the presence of institutional controls such as fences and signs that holds our space hostage with waste, contaminates our aquifers, and fails to incorporate and encourage re-development is unacceptable.

YOU have the POWER & RESPONSIBILITY to ACT NOW and support a collaborative, regional, and equitable CLEAN UP of the Kalamazoo River Superfund Site to a level that protects human & ecosystem health and provides for our economic futures. We are counting on you!
